

A PEEK INTO OUR BRAIN PORTRAYED THROUGH THE “ART OF PERCEPTION”

**Seah Hagan, Division of Behavioral, Social Sciences and Education
(hagan351@mymail.tcc.fl.edu)**

**Faculty Sponsor: Dr. Gina O’Neal-Moffitt, Division of Behavioral, Social Sciences and
Education**

As life has its many layers, it is only fitting to try to capture its beauty in a similar manner. From the beginning of time, man and the wild have been attracted to the beauty of the world. Art is inherent in every aspect of life, and it can be traced to the first signs of human existence. It is in our genetic wiring to be drawn to the beauty around us. Aesthetics are everywhere; language, love, and life. In the last two decades, the study of neuroaesthetics has begun to explore the relationship between art and the brain. In this photographic piece, I will portray the aspects of life and art as they meet in the everyday world. I will be using a series of my own photographs, layered upon each other to represent what aesthetics we perceive and capture with our mind’s eye, all in a single moment.
